## 2 Management statement

This chapter describes the ISMS policy of Corsano Health B.V. (Corsano). It indicates that we possess the quality and readiness to professionally manage the processes that impact information security.

To achieve this objective, the organization has been effectively structured, and all processes relevant to information security have been systematically organized. The employees are informed about and familiar with the ISMS and the related documentation, and they apply these consistently. Additionally, employees are aware of the importance of working according to the requirements and expectations regarding information security from clients and other stakeholders, and they are informed about legally imposed requirements and regulations.

The ISMS policy is shaped by the following values:

- Availability
- Integrity
- Confidentiality

The above values help define the information security (IS) objectives and Key Performance Indicators (KPIs) of the organization. Management is committed to complying with the requirements according to ISO 27001:2022 and NEN 7510-1:2017+A1:2020 and declares to do everything necessary to establish, implement, maintain, and continuously improve the effectiveness of the ISMS, as described in this ISMS handbook.

Management will demonstrate its commitment to this ISMS by:

- Ensuring that the ISMS policy aligns with the strategic direction and context of the organization.
- Ensuring that the ISMS seamlessly integrates with the business processes.
- Encouraging and facilitating employees where necessary to achieve business objectives.

Management ensures that the confidentiality, availability, and integrity of the ISMS are maintained when changes are implemented.
